

Cheat Sheet for Custom Notes

Begin the "Initial command" box with this sentence: *"fill in this blank medical template based on the transcript below:"* then paste your blank template below it.

Include these commands in the "optional formatting" box to give the AI clearer instructions on your desired format:

- To make the titles bold put ***Bold each title in the template*** or ***put 2 asterisks on the left and right of each title***
- To have simplified results put ***provide a brief and clear response***
- To write a brief and concise history: ***Write a short, concise Subjective/history***
- To have more detailed results put ***provide a detailed response***
- To have a summary at the end of the note put ***generate a summary at the end of the note***
- For discharge instructions put ***generate discharge instructions at the end***
- To make a list put ***write out every section as a list except for the subjective***
- Signature at the end put ***add the following signature at the end of the note*** *signature*
- To separate sections put ***separate each section into appropriate subsections***
- To change the default values into abnormal findings put ***replace default normal values with abnormalities mentioned in the transcript***
- To write the assessment section in bullet points put ***Write the assessment section in bullet points***
- To add a rule out (r/o) statement for the assessment put ***Write a rule out statement (R/o) under each bullet point in the assessment***
- To make a problem list put ***write a problem list for the assessment section***
- To add 'Rx' beside each medication put ***Write 'Rx-' beside each bullet point for Medications***
- ***Make all abnormal findings capitalized***
- ***Put an open and closed bracket on each side of the titles***
- ***Write Mg per ml as mg/ml***
- ***Write Mg per Kg as mg/kg***
